

Name: Abdul Malik

YoungDev Internship

Tasks:

Task 1: Analyze Network Traffic

- Monitor and analyze network traffic using a tool like Wireshark.
- Identify common network protocols and traffic patterns.

Task 2: Conduct a Penetration Test

- Perform a basic penetration test on a web application.
- Use tools like Burp Suite or Metasploit to find security vulnerabilities.
- Document findings and suggest remediation steps.

Task 3: Develop and Implement an Incident Response Plan

- Create a plan for responding to security incidents.
- Define roles and responsibilities for the incident response team.
- Outline steps for detecting, containing, and recovering from incidents.
